Problem 817: Linked List Components

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

You are given the

head

of a linked list containing unique integer values and an integer array

nums

that is a subset of the linked list values.

Return

the number of connected components in

nums

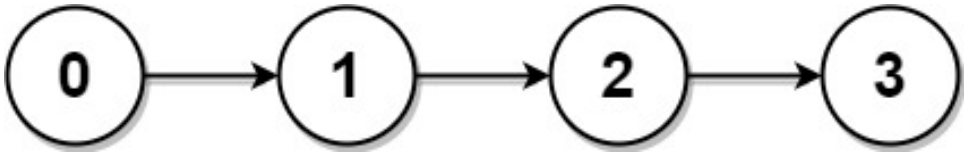
where two values are connected if they appear

consecutively

in the linked list

.

Example 1:



Input:

head = [0,1,2,3], nums = [0,1,3]

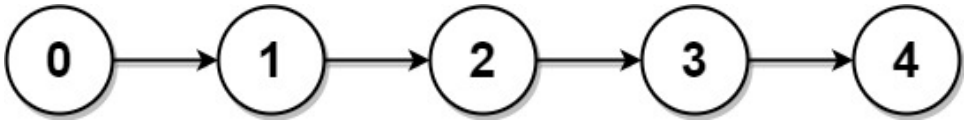
Output:

2

Explanation:

0 and 1 are connected, so [0, 1] and [3] are the two connected components.

Example 2:



Input:

head = [0,1,2,3,4], nums = [0,3,1,4]

Output:

2

Explanation:

0 and 1 are connected, 3 and 4 are connected, so [0, 1] and [3, 4] are the two connected components.

Constraints:

The number of nodes in the linked list is

n

.

1 <= n <= 10

4

0 <= Node.val < n

All the values

Node.val

are

unique

.

1 <= nums.length <= n

0 <= nums[i] < n

All the values of

nums

are

unique

.

Code Snippets

C++:

```
/**
* Definition for singly-linked list.
```

```
* struct ListNode {
* int val;
* ListNode *next;
* ListNode() : val(0), next(nullptr) {}
* ListNode(int x) : val(x), next(nullptr) {}
* ListNode(int x, ListNode *next) : val(x), next(next) {}
* };
*/
class Solution {
public:
int numComponents(ListNode* head, vector<int>& nums) {

}
};
```

Java:

```
/**
* Definition for singly-linked list.
* public class ListNode {
* int val;
* ListNode next;
* ListNode() {}
* ListNode(int val) { this.val = val; }
* ListNode(int val, ListNode next) { this.val = val; this.next = next; }
* }
*/
class Solution {
public int numComponents(ListNode head, int[] nums) {

}
}
```

Python3:

```
# Definition for singly-linked list.
# class ListNode:
# def __init__(self, val=0, next=None):
# self.val = val
# self.next = next
class Solution:
def numComponents(self, head: Optional[ListNode], nums: List[int]) -> int:
```

Python:

```
# Definition for singly-linked list.
# class ListNode(object):
# def __init__(self, val=0, next=None):
# self.val = val
# self.next = next
class Solution(object):
def numComponents(self, head, nums):
"""
:type head: Optional[ListNode]
:type nums: List[int]
:rtype: int
"""
```

JavaScript:

```
/**
* Definition for singly-linked list.
* function ListNode(val, next) {
* this.val = (val===undefined ? 0 : val)
* this.next = (next===undefined ? null : next)
* }
*/
/**
* @param {ListNode} head
* @param {number[]} nums
* @return {number}
*/
var numComponents = function(head, nums) {

};
```

TypeScript:

```
/**
* Definition for singly-linked list.
* class ListNode {
* val: number
* next: ListNode | null
* constructor(val?: number, next?: ListNode | null) {
* this.val = (val===undefined ? 0 : val)
* this.next = (next===undefined ? null : next)
```

```
* }
* }
*/

function numComponents(head: ListNode | null, nums: number[]): number {

};
```

C#:

```
/**
* Definition for singly-linked list.
* public class ListNode {
* public int val;
* public ListNode next;
* public ListNode(int val=0, ListNode next=null) {
* this.val = val;
* this.next = next;
* }
* }
*/
public class Solution {
public int NumComponents(ListNode head, int[] nums) {

}
}
```

C:

```
/**
* Definition for singly-linked list.
* struct ListNode {
* int val;
* struct ListNode *next;
* };
*/
int numComponents(struct ListNode* head, int* nums, int numsSize) {

}
```

Go:

```
/**
* Definition for singly-linked list.
* type ListNode struct {
* Val int
* Next *ListNode
* }
*/
func numComponents(head *ListNode, nums []int) int {

}
```

Kotlin:

```
/**
* Example:
* var li = ListNode(5)
* var v = li.`val`
* Definition for singly-linked list.
* class ListNode(var `val`: Int) {
* var next: ListNode? = null
* }
*/
class Solution {
fun numComponents(head: ListNode?, nums: IntArray): Int {

}
}
```

Swift:

```
/**
* Definition for singly-linked list.
* public class ListNode {
* public var val: Int
* public var next: ListNode?
* public init() { self.val = 0; self.next = nil; }
* public init(_ val: Int) { self.val = val; self.next = nil; }
* public init(_ val: Int, _ next: ListNode?) { self.val = val; self.next =
next; }
* }
*/
class Solution {
func numComponents(_ head: ListNode?, _ nums: [Int]) -> Int {
```

```
}
}
```

Rust:

```
// Definition for singly-linked list.
// #[derive(PartialEq, Eq, Clone, Debug)]
// pub struct ListNode {
// pub val: i32,
// pub next: Option<Box<ListNode>>
// }
//
// impl ListNode {
// #[inline]
// fn new(val: i32) -> Self {
// ListNode {
// next: None,
// val
// }
// }
// }
impl Solution {
pub fn num_components(head: Option<Box<ListNode>>, nums: Vec<i32>) -> i32 {

}
}
```

Ruby:

```
# Definition for singly-linked list.
# class ListNode
# attr_accessor :val, :next
# def initialize(val = 0, _next = nil)
# @val = val
# @next = _next
# end
# end
# @param {ListNode} head
# @param {Integer[]} nums
# @return {Integer}
def num_components(head, nums)
```

```
end
```

PHP:

```
/**
* Definition for a singly-linked list.
* class ListNode {
* public $val = 0;
* public $next = null;
* function __construct($val = 0, $next = null) {
* $this->val = $val;
* $this->next = $next;
* }
* }
*/
class Solution {

/**
* @param ListNode $head
* @param Integer[] $nums
* @return Integer
*/
function numComponents($head, $nums) {

}
}
```

Dart:

```
/**
* Definition for singly-linked list.
* class ListNode {
* int val;
* ListNode? next;
* ListNode([this.val = 0, this.next]);
* }
*/
class Solution {
int numComponents(ListNode? head, List<int> nums) {

}
```

```
}
```

Scala:

```
/**
* Definition for singly-linked list.
* class ListNode(_x: Int = 0, _next: ListNode = null) {
* var next: ListNode = _next
* var x: Int = _x
* }
*/
object Solution {
def numComponents(head: ListNode, nums: Array[Int]): Int = {

}
}
```

Elixir:

```
# Definition for singly-linked list.
#
# defmodule ListNode do
# @type t :: %__MODULE__{
# val: integer,
# next: ListNode.t() | nil
# }
# defstruct val: 0, next: nil
# end

defmodule Solution do
@spec num_components(head :: ListNode.t | nil, nums :: [integer]) :: integer
def num_components(head, nums) do

end
end
```

Erlang:

```
%% Definition for singly-linked list.
%%
%% -record(list_node, {val = 0 :: integer(),
%% next = null :: 'null' | #list_node{}}).
```

```
-spec num_components(Head :: #list_node{} | null, Nums :: [integer()]) ->
integer().
num_components(Head, Nums) ->
.
```

Racket:

```
; Definition for singly-linked list:
#|

; val : integer?
; next : (or/c list-node? #f)
(struct list-node
(val next) #:mutable #:transparent)

; constructor
(define (make-list-node [val 0])
(list-node val #f))

|#

(define/contract (num-components head nums)
(-> (or/c list-node? #f) (listof exact-integer?) exact-integer?)
)
```

Solutions

C++ Solution:

```
/*
* Problem: Linked List Components
* Difficulty: Medium
* Tags: array, hash, linked_list
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/
```

```
/**
* Definition for singly-linked list.
* struct ListNode {
* int val;
* ListNode *next;
* ListNode() : val(0), next(nullptr) {
// TODO: Implement optimized solution
return 0;
}
* ListNode(int x) : val(x), next(nullptr) {
// TODO: Implement optimized solution
return 0;
}
* ListNode(int x, ListNode *next) : val(x), next(next) {
// TODO: Implement optimized solution
return 0;
}
* };
*/
class Solution {
public:
int numComponents(ListNode* head, vector<int>& nums) {

}

* }
*/
class Solution {

/**
* @param ListNode $head
* @param Integer[] $nums
* @return Integer
*/
function numComponents($head, $nums) {
```

```
}
}
```

Dart Solution:

```
/**
* Definition for singly-linked list.
* class ListNode {
* int val;
* ListNode? next;
* ListNode([this.val = 0, this.next]);
* }
*/
class Solution {
int numComponents(ListNode? head, List<int> nums) {

}
}
```

Scala Solution:

```
/**
* Definition for singly-linked list.
* class ListNode(_x: Int = 0, _next: ListNode = null) {
* var next: ListNode = _next
* var x: Int = _x
* }
*/
object Solution {
def numComponents(head: ListNode, nums: Array[Int]): Int = {

}
}
```

Elixir Solution:

```
# Definition for singly-linked list.
#
# defmodule ListNode do
# @type t :: %__MODULE__{
# val: integer,
```

```
# next: ListNode.t() | nil
# }
# defstruct val: 0, next: nil
# end

defmodule Solution do
@spec num_components(head :: ListNode.t | nil, nums :: [integer]) :: integer
def num_components(head, nums) do

end
end
```

Erlang Solution:

```
%% Definition for singly-linked list.
%%
%% -record(list_node, {val = 0 :: integer(),
%% next = null :: 'null' | #list_node{}}).

-spec num_components(Head :: #list_node{} | null, Nums :: [integer()]) ->
integer().
num_components(Head, Nums) ->
.
```

Racket Solution:

```
; Definition for singly-linked list:
#|

; val : integer?
; next : (or/c list-node? #f)
(struct list-node
(val next) #:mutable #:transparent)

; constructor
(define (make-list-node [val 0])
(list-node val #f))

|#

(define/contract (num-components head nums)
```

```
(-> (or/c list-node? #f) (listof exact-integer?) exact-integer?)
)
```
