Problem 112: Path Sum

Problem Information

Difficulty: Easy
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the

root

of a binary tree and an integer

targetSum

, return

true

if the tree has a

root-to-leaf

path such that adding up all the values along the path equals

targetSum

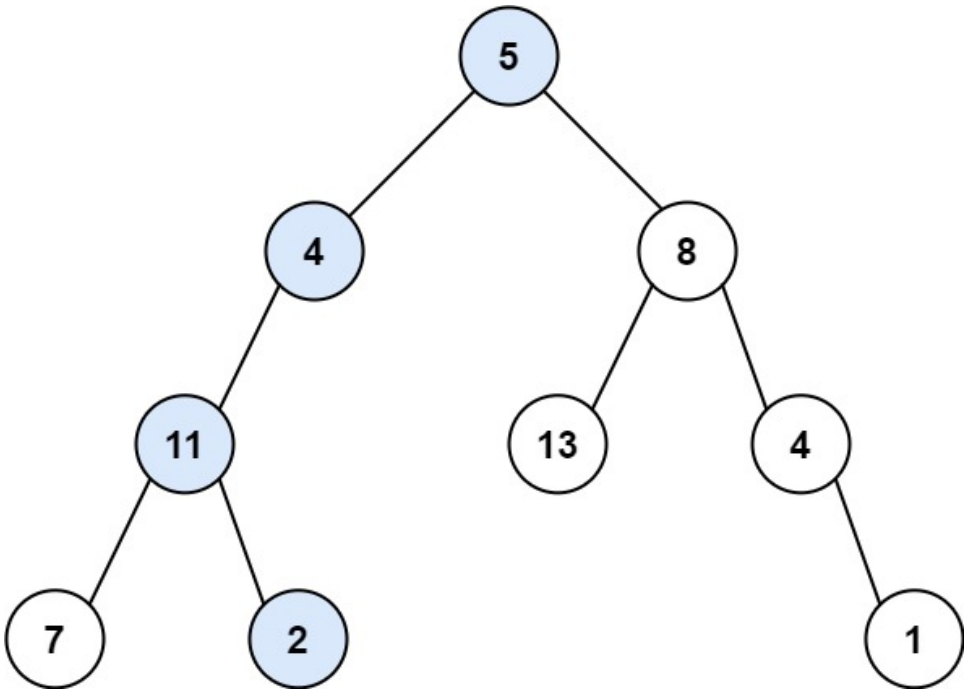
.

A

leaf

is a node with no children.

Example 1:



Input:

root = [5,4,8,11,null,13,4,7,2,null,null,null,1], targetSum = 22

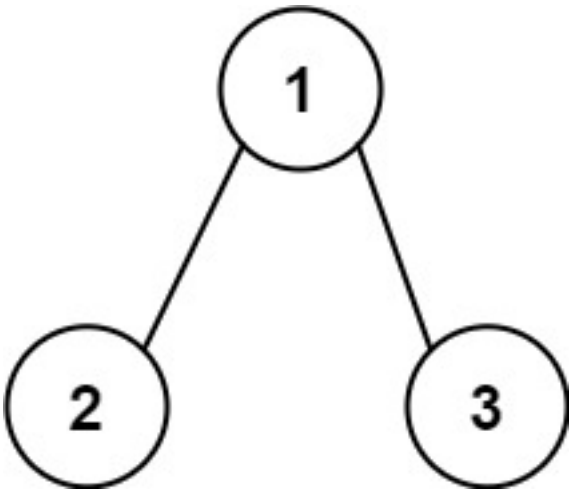
Output:

true

Explanation:

The root-to-leaf path with the target sum is shown.

Example 2:



Input:

root = [1,2,3], targetSum = 5

Output:

false

Explanation:

There are two root-to-leaf paths in the tree: (1 --> 2): The sum is 3. (1 --> 3): The sum is 4. There is no root-to-leaf path with sum = 5.

Example 3:

Input:

root = [], targetSum = 0

Output:

false

Explanation:

Since the tree is empty, there are no root-to-leaf paths.

Constraints:

The number of nodes in the tree is in the range

[0, 5000]

.

-1000 <= Node.val <= 1000

-1000 <= targetSum <= 1000

Code Snippets

C++:

```
