Problem 25: Reverse Nodes in k-Group

Problem Information

Difficulty: Hard
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the

head

of a linked list, reverse the nodes of the list

k

at a time, and return

the modified list

.

k

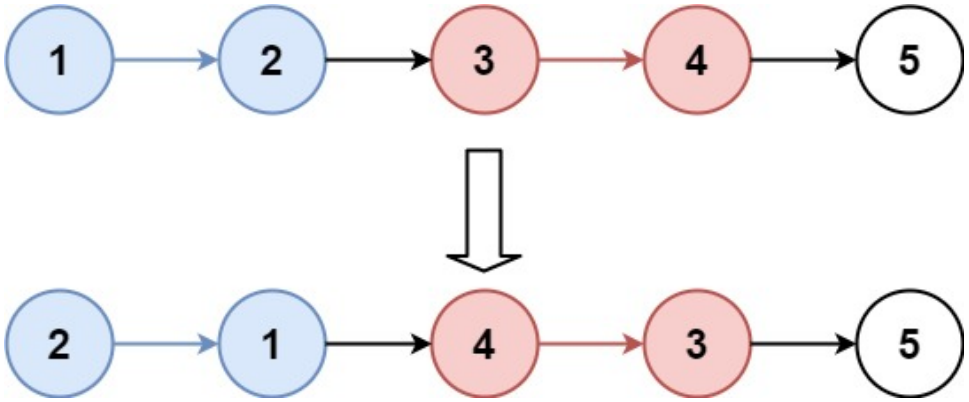
is a positive integer and is less than or equal to the length of the linked list. If the number of nodes is not a multiple of

k

then left-out nodes, in the end, should remain as it is.

You may not alter the values in the list's nodes, only nodes themselves may be changed.

Example 1:



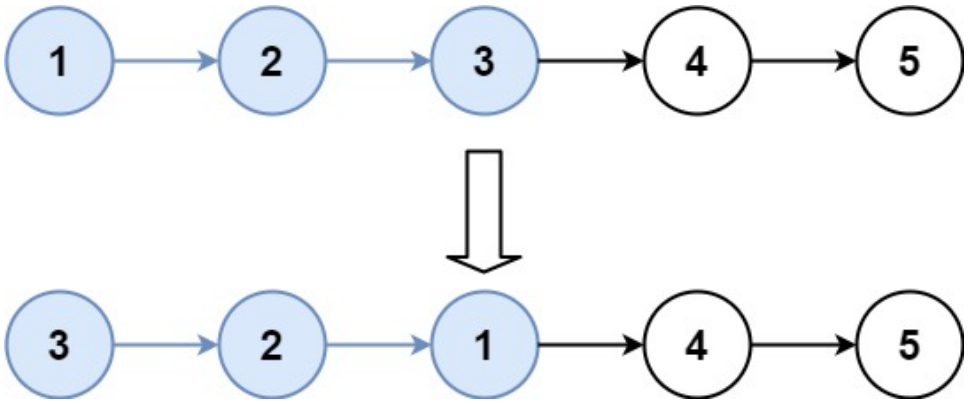
Input:

head = [1,2,3,4,5], k = 2

Output:

[2,1,4,3,5]

Example 2:



Input:

head = [1,2,3,4,5], k = 3

Output:

[3,2,1,4,5]

Constraints:

The number of nodes in the list is

n

.

1 <= k <= n <= 5000

0 <= Node.val <= 1000

Follow-up:

Can you solve the problem in

O(1)

extra memory space?
