Problem 2807: Insert Greatest Common Divisors in Linked List

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the head of a linked list

head

, in which each node contains an integer value.

Between every pair of adjacent nodes, insert a new node with a value equal to the

greatest common divisor

of them.

Return

the linked list after insertion

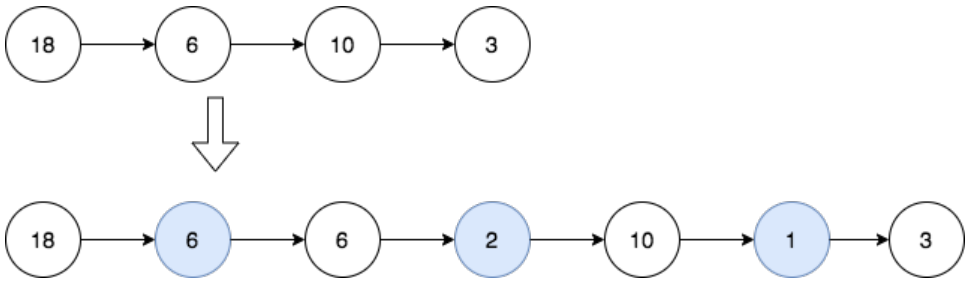
.

The

greatest common divisor

of two numbers is the largest positive integer that evenly divides both numbers.

Example 1:



Input:

head = [18,6,10,3]

Output:

[18,6,6,2,10,1,3]

Explanation:

The 1

st

diagram denotes the initial linked list and the 2

nd

diagram denotes the linked list after inserting the new nodes (nodes in blue are the inserted nodes). - We insert the greatest common divisor of 18 and 6 = 6 between the 1

st

and the 2

nd

nodes. - We insert the greatest common divisor of 6 and 10 = 2 between the 2

nd

and the 3

rd

nodes. - We insert the greatest common divisor of 10 and 3 = 1 between the 3

rd

and the 4

th

nodes. There are no more adjacent nodes, so we return the linked list.

Example 2:

Input:

head = [7]

Output:

[7]

Explanation:

The 1

st

diagram denotes the initial linked list and the 2

nd

diagram denotes the linked list after inserting the new nodes. There are no pairs of adjacent nodes, so we return the initial linked list.

Constraints:

The number of nodes in the list is in the range

[1, 5000]

.

1 <= Node.val <= 1000

Code Snippets

C++:

```
/**
* Definition for singly-linked list.
* struct ListNode {
* int val;
* ListNode *next;
* ListNode() : val(0), next(nullptr) {}
* ListNode(int x) : val(x), next(nullptr) {}
* ListNode(int x, ListNode *next) : val(x), next(next) {}
* };
*/
class Solution {
public:
ListNode* insertGreatestCommonDivisors(ListNode* head) {

}
};
```

Java:

```
/**
* Definition for singly-linked list.
* public class ListNode {
* int val;
* ListNode next;
* ListNode() {}
* ListNode(int val) { this.val = val; }
* ListNode(int val, ListNode next) { this.val = val; this.next = next; }
* }
*/
class Solution {
public ListNode insertGreatestCommonDivisors(ListNode head) {

}
}
```

Python3:

```
# Definition for singly-linked list.
# class ListNode:
# def __init__(self, val=0, next=None):
# self.val = val
# self.next = next
class Solution:
def insertGreatestCommonDivisors(self, head: Optional[ListNode]) ->
Optional[ListNode]:
```

Python:

```
# Definition for singly-linked list.
# class ListNode(object):
# def __init__(self, val=0, next=None):
# self.val = val
# self.next = next
class Solution(object):
def insertGreatestCommonDivisors(self, head):
"""
:type head: Optional[ListNode]
:rtype: Optional[ListNode]
"""
```

JavaScript:

```
/**
* Definition for singly-linked list.
* function ListNode(val, next) {
* this.val = (val===undefined ? 0 : val)
* this.next = (next===undefined ? null : next)
* }
*/
/**
* @param {ListNode} head
* @return {ListNode}
*/
var insertGreatestCommonDivisors = function(head) {

};
```

TypeScript:

```
/**
* Definition for singly-linked list.
* class ListNode {
* val: number
* next: ListNode | null
* constructor(val?: number, next?: ListNode | null) {
* this.val = (val===undefined ? 0 : val)
* this.next = (next===undefined ? null : next)
* }
* }
*/

function insertGreatestCommonDivisors(head: ListNode | null): ListNode | null
{

};
```

C#:

```
/**
* Definition for singly-linked list.
* public class ListNode {
* public int val;
* public ListNode next;
* public ListNode(int val=0, ListNode next=null) {
* this.val = val;
```

```
* this.next = next;
* }
* }
*/
public class Solution {
public ListNode InsertGreatestCommonDivisors(ListNode head) {

}
}
```

C:

```
/**
* Definition for singly-linked list.
* struct ListNode {
* int val;
* struct ListNode *next;
* };
*/
struct ListNode* insertGreatestCommonDivisors(struct ListNode* head) {

}
```

Go:

```
/**
* Definition for singly-linked list.
* type ListNode struct {
* Val int
* Next *ListNode
* }
*/
func insertGreatestCommonDivisors(head *ListNode) *ListNode {

}
```

Kotlin:

```
/**
* Example:
* var li = ListNode(5)
* var v = li.`val`
```

```
* Definition for singly-linked list.
* class ListNode(var `val`: Int) {
* var next: ListNode? = null
* }
*/
class Solution {
fun insertGreatestCommonDivisors(head: ListNode?): ListNode? {

}
}
```

Swift:

```
/**
* Definition for singly-linked list.
* public class ListNode {
* public var val: Int
* public var next: ListNode?
* public init() { self.val = 0; self.next = nil; }
* public init(_ val: Int) { self.val = val; self.next = nil; }
* public init(_ val: Int, _ next: ListNode?) { self.val = val; self.next =
next; }
* }
*/
class Solution {
func insertGreatestCommonDivisors(_ head: ListNode?) -> ListNode? {

}
}
```

Rust:

```
// Definition for singly-linked list.
// #[derive(PartialEq, Eq, Clone, Debug)]
// pub struct ListNode {
// pub val: i32,
// pub next: Option<Box<ListNode>>
// }
//
// impl ListNode {
// #[inline]
// fn new(val: i32) -> Self {
```

```
// ListNode {
// next: None,
// val
// }
// }
// }
impl Solution {
pub fn insert_greatest_common_divisors(head: Option<Box<ListNode>>) ->
Option<Box<ListNode>> {

}
}
```

Ruby:

```
# Definition for singly-linked list.
# class ListNode
# attr_accessor :val, :next
# def initialize(val = 0, _next = nil)
# @val = val
# @next = _next
# end
# end
# @param {ListNode} head
# @return {ListNode}
def insert_greatest_common_divisors(head)

end
```

PHP:

```
/**
* Definition for a singly-linked list.
* class ListNode {
* public $val = 0;
* public $next = null;
* function __construct($val = 0, $next = null) {
* $this->val = $val;
* $this->next = $next;
* }
* }
*/
```

```
class Solution {

/**
* @param ListNode $head
* @return ListNode
*/
function insertGreatestCommonDivisors($head) {

}
}
```

Dart:

```
/**
* Definition for singly-linked list.
* class ListNode {
* int val;
* ListNode? next;
* ListNode([this.val = 0, this.next]);
* }
*/
class Solution {
ListNode? insertGreatestCommonDivisors(ListNode? head) {

}
}
```

Scala:

```
/**
* Definition for singly-linked list.
* class ListNode(_x: Int = 0, _next: ListNode = null) {
* var next: ListNode = _next
* var x: Int = _x
* }
*/
object Solution {
def insertGreatestCommonDivisors(head: ListNode): ListNode = {

}
}
```

Elixir:

```
# Definition for singly-linked list.
#
# defmodule ListNode do
# @type t :: %__MODULE__{
# val: integer,
# next: ListNode.t() | nil
# }
# defstruct val: 0, next: nil
# end

defmodule Solution do
@spec insert_greatest_common_divisors(head :: ListNode.t | nil) :: ListNode.t
| nil
def insert_greatest_common_divisors(head) do

end
end
```

Erlang:

```
%% Definition for singly-linked list.
%%
%% -record(list_node, {val = 0 :: integer(),
%% next = null :: 'null' | #list_node{}}).

-spec insert_greatest_common_divisors(Head :: #list_node{} | null) ->
#list_node{} | null.
insert_greatest_common_divisors(Head) ->
.
```

Racket:

```
; Definition for singly-linked list:
#|

; val : integer?
; next : (or/c list-node? #f)
(struct list-node
(val next) #:mutable #:transparent)

; constructor
```

```
(define (make-list-node [val 0])
(list-node val #f))

|#

(define/contract (insert-greatest-common-divisors head)
(-> (or/c list-node? #f) (or/c list-node? #f))
)
```

Solutions

C++ Solution:

```
/*
