Problem 652: Find Duplicate Subtrees

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the

root

of a binary tree, return all

duplicate subtrees

.

For each kind of duplicate subtrees, you only need to return the root node of any

one

of them.

Two trees are

duplicate

if they have the

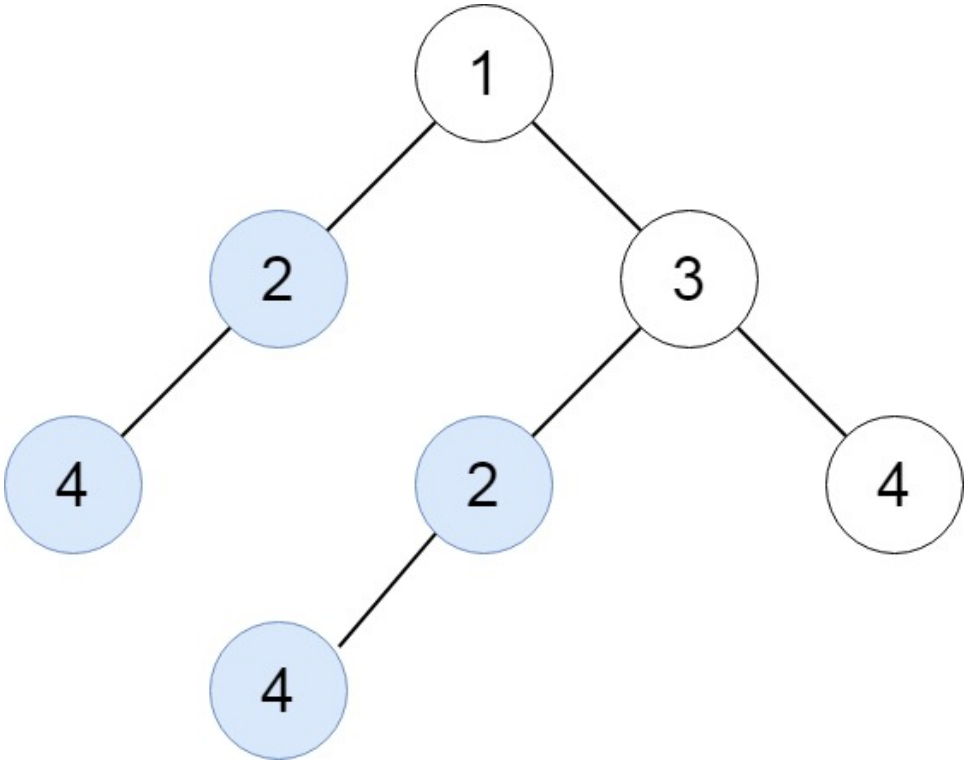
same structure

with the

same node values

.

Example 1:



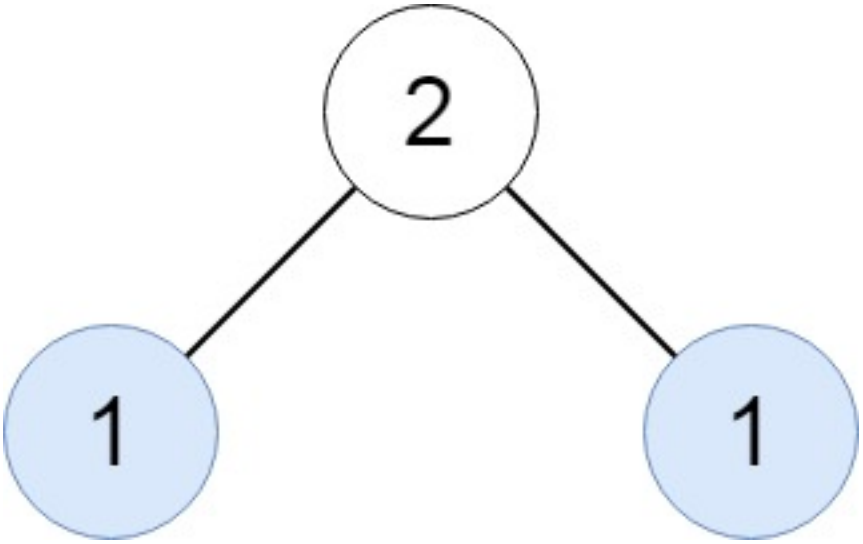
Input:

root = [1,2,3,4,null,2,4,null,null,4]

Output:

[[2,4],[4]]

Example 2:



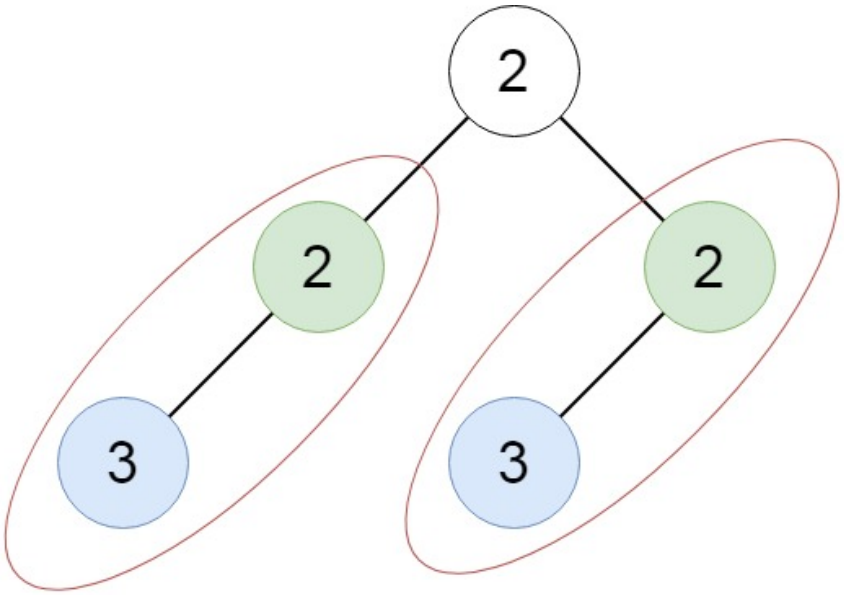
Input:

root = [2,1,1]

Output:

[[1]]

Example 3:



Input:

root = [2,2,2,3,null,3,null]

Output:

[[2,3],[3]]

Constraints:

The number of the nodes in the tree will be in the range

[1, 5000]

-200 <= Node.val <= 200

Code Snippets

C++:

```
