Problem 1367: Linked List in Binary Tree

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given a binary tree

root

and a linked list with

head

as the first node.

Return True if all the elements in the linked list starting from the

head

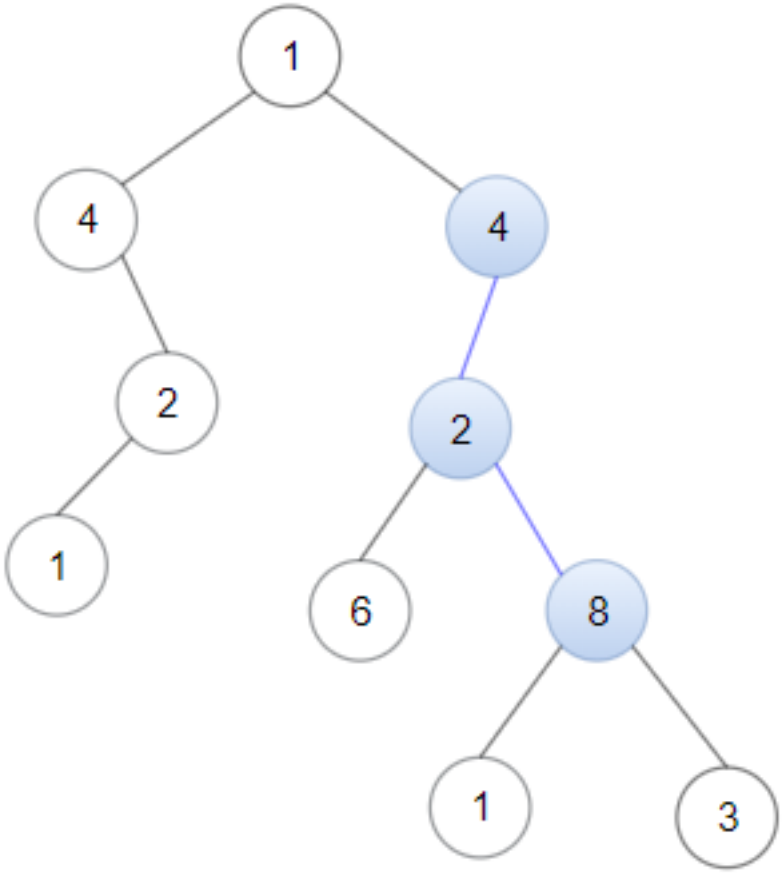
correspond to some

downward path

connected in the binary tree otherwise return False.

In this context downward path means a path that starts at some node and goes downwards.

Example 1:



Input:

head = [4,2,8], root = [1,4,4,null,2,2,null,1,null,6,8,null,null,null,null,1,3]

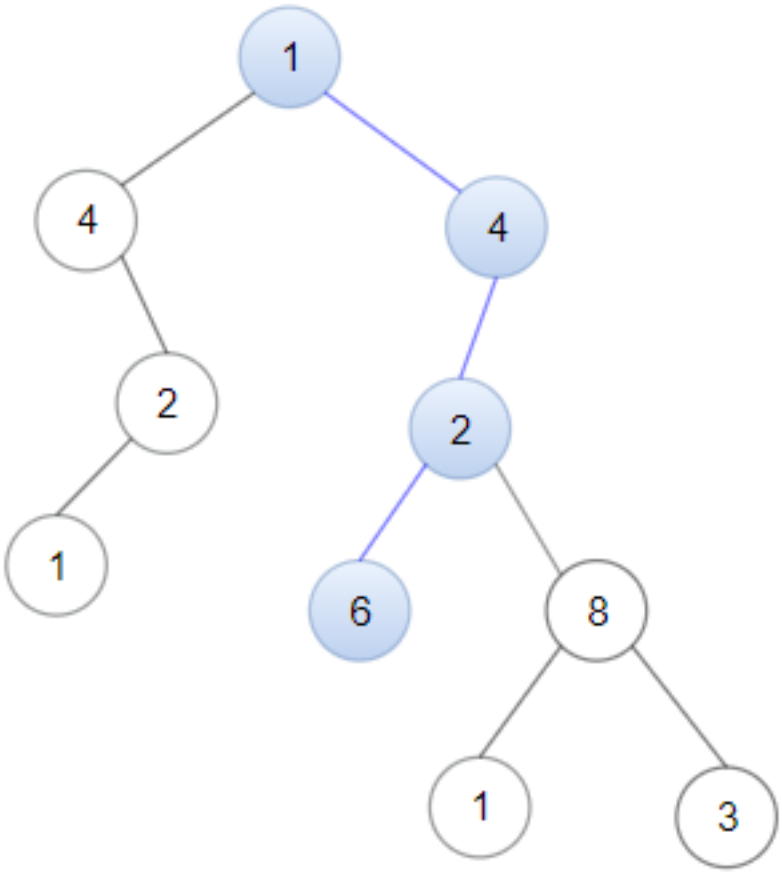
Output:

true

Explanation:

Nodes in blue form a subpath in the binary Tree.

Example 2:



Input:

head = [1,4,2,6], root = [1,4,4,null,2,2,null,1,null,6,8,null,null,null,null,1,3]

Output:

true

Example 3:

Input:

head = [1,4,2,6,8], root = [1,4,4,null,2,2,null,1,null,6,8,null,null,null,null,1,3]

Output:

false

Explanation:

There is no path in the binary tree that contains all the elements of the linked list from

head

.

Constraints:

The number of nodes in the tree will be in the range

[1, 2500]

.

The number of nodes in the list will be in the range

[1, 100]

.

1 <= Node.val <= 100

for each node in the linked list and binary tree.
