Problem 2181: Merge Nodes in Between Zeros

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

You are given the

head

of a linked list, which contains a series of integers

separated

by

0

's. The

beginning

and

end

of the linked list will have

Node.val == 0

.

For

every

two consecutive

0

's,

merge

all the nodes lying in between them into a single node whose value is the

sum

of all the merged nodes. The modified list should not contain any

0

's.

Return

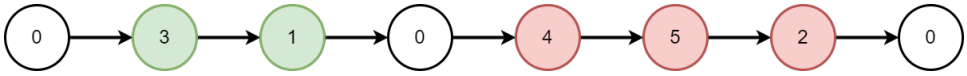
the

head

of the modified linked list

.

Example 1:



Input:

head = [0,3,1,0,4,5,2,0]

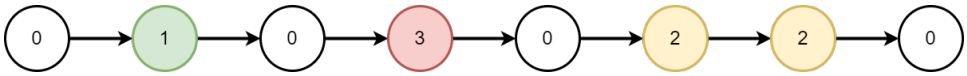
Output:

[4,11]

Explanation:

The above figure represents the given linked list. The modified list contains - The sum of the nodes marked in green: 3 + 1 = 4. - The sum of the nodes marked in red: 4 + 5 + 2 = 11.

Example 2:



Input:

head = [0,1,0,3,0,2,2,0]

Output:

[1,3,4]

Explanation:

The above figure represents the given linked list. The modified list contains - The sum of the nodes marked in green: 1 = 1. - The sum of the nodes marked in red: 3 = 3. - The sum of the nodes marked in yellow: 2 + 2 = 4.

Constraints:

The number of nodes in the list is in the range

[3, 2 * 10

5

]

.

0 <= Node.val <= 1000

There are

no

two consecutive nodes with

Node.val == 0

.

The

beginning

and

end

of the linked list have

Node.val == 0

.

Code Snippets

C++:

```
/**
