Problem 3381: Maximum Subarray Sum With Length Divisible by K

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

You are given an array of integers

nums

and an integer

k

.

Return the

maximum

sum of a

subarray

of

nums

, such that the size of the subarray is

divisible

by

k

.

Example 1:

Input:

nums = [1,2], k = 1

Output:

3

Explanation:

The subarray

[1, 2]

with sum 3 has length equal to 2 which is divisible by 1.

Example 2:

Input:

nums = [-1,-2,-3,-4,-5], k = 4

Output:

-10

Explanation:

The maximum sum subarray is

[-1, -2, -3, -4]

which has length equal to 4 which is divisible by 4.

Example 3:

Input:

nums = [-5,1,2,-3,4], k = 2

Output:

4

Explanation:

The maximum sum subarray is

[1, 2, -3, 4]

which has length equal to 4 which is divisible by 2.

Constraints:

1 <= k <= nums.length <= 2 * 10

5

-10

9

<= nums[i] <= 10

9

Code Snippets

C++:

```
class Solution {
public:
long long maxSubarraySum(vector<int>& nums, int k) {

}
};
```

Java:

```
class Solution {
public long maxSubarraySum(int[] nums, int k) {

}
}
```

Python3:

```
class Solution:
def maxSubarraySum(self, nums: List[int], k: int) -> int:
```

Python:

```
class Solution(object):
def maxSubarraySum(self, nums, k):
"""
:type nums: List[int]
:type k: int
:rtype: int
"""
```

JavaScript:

```
/**
* @param {number[]} nums
* @param {number} k
* @return {number}
*/
var maxSubarraySum = function(nums, k) {

};
```

TypeScript:

```
function maxSubarraySum(nums: number[], k: number): number {

};
```

C#:

```
public class Solution {
public long MaxSubarraySum(int[] nums, int k) {

}
}
```

C:

```
long long maxSubarraySum(int* nums, int numsSize, int k) {

}
```

Go:

```
func maxSubarraySum(nums []int, k int) int64 {

}
```

Kotlin:

```
class Solution {
fun maxSubarraySum(nums: IntArray, k: Int): Long {

}
}
```

Swift:

```
class Solution {
func maxSubarraySum(_ nums: [Int], _ k: Int) -> Int {

}
}
```

Rust:

```
impl Solution {
pub fn max_subarray_sum(nums: Vec<i32>, k: i32) -> i64 {

}
}
```

Ruby:

```
# @param {Integer[]} nums
# @param {Integer} k
# @return {Integer}
def max_subarray_sum(nums, k)

end
```

PHP:

```
class Solution {

/**
* @param Integer[] $nums
* @param Integer $k
* @return Integer
*/
function maxSubarraySum($nums, $k) {

}
}
```

Dart:

```
class Solution {
int maxSubarraySum(List<int> nums, int k) {

}
}
```

Scala:

```
object Solution {
def maxSubarraySum(nums: Array[Int], k: Int): Long = {

}
```

```
}
```

Elixir:

```
defmodule Solution do
@spec max_subarray_sum(nums :: [integer], k :: integer) :: integer
def max_subarray_sum(nums, k) do

end
end
```

Erlang:

```
-spec max_subarray_sum(Nums :: [integer()], K :: integer()) -> integer().
max_subarray_sum(Nums, K) ->
.
```

Racket:

```
(define/contract (max-subarray-sum nums k)
(-> (listof exact-integer?) exact-integer? exact-integer?)
)
```

Solutions

C++ Solution:

```
/*
* Problem: Maximum Subarray Sum With Length Divisible by K
* Difficulty: Medium
* Tags: array, hash
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/

class Solution {
public:
long long maxSubarraySum(vector<int>& nums, int k) {
```

```
}
};
```

Java Solution:

```
/**
* Problem: Maximum Subarray Sum With Length Divisible by K
* Difficulty: Medium
* Tags: array, hash
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/

class Solution {
public long maxSubarraySum(int[] nums, int k) {

}
}
```

Python3 Solution:

```
"""
Problem: Maximum Subarray Sum With Length Divisible by K
Difficulty: Medium
Tags: array, hash

Approach: Use two pointers or sliding window technique
Time Complexity: O(n) or O(n log n)
Space Complexity: O(n) for hash map
"""

class Solution:
def maxSubarraySum(self, nums: List[int], k: int) -> int:
# TODO: Implement optimized solution
pass
```

Python Solution:

```
class Solution(object):
def maxSubarraySum(self, nums, k):
"""
:type nums: List[int]
:type k: int
:rtype: int
"""
```

JavaScript Solution:

```
/**
* Problem: Maximum Subarray Sum With Length Divisible by K
* Difficulty: Medium
* Tags: array, hash
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/

/**
* @param {number[]} nums
* @param {number} k
* @return {number}
*/
var maxSubarraySum = function(nums, k) {

};
```

TypeScript Solution:

```
/**
* Problem: Maximum Subarray Sum With Length Divisible by K
* Difficulty: Medium
* Tags: array, hash
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/

function maxSubarraySum(nums: number[], k: number): number {
```

```
};
```

C# Solution:

```
/*
* Problem: Maximum Subarray Sum With Length Divisible by K
* Difficulty: Medium
* Tags: array, hash
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/

public class Solution {
public long MaxSubarraySum(int[] nums, int k) {

}
}
```

C Solution:

```
/*
* Problem: Maximum Subarray Sum With Length Divisible by K
* Difficulty: Medium
* Tags: array, hash
*
* Approach: Use two pointers or sliding window technique
* Time Complexity: O(n) or O(n log n)
* Space Complexity: O(n) for hash map
*/

long long maxSubarraySum(int* nums, int numsSize, int k) {

}
```

Go Solution:

```
// Problem: Maximum Subarray Sum With Length Divisible by K
// Difficulty: Medium
```

```
// Tags: array, hash
//
// Approach: Use two pointers or sliding window technique
// Time Complexity: O(n) or O(n log n)
// Space Complexity: O(n) for hash map

func maxSubarraySum(nums []int, k int) int64 {

}
```

Kotlin Solution:

```
class Solution {
fun maxSubarraySum(nums: IntArray, k: Int): Long {

}
}
```

Swift Solution:

```
class Solution {
func maxSubarraySum(_ nums: [Int], _ k: Int) -> Int {

}
}
```

Rust Solution:

```
// Problem: Maximum Subarray Sum With Length Divisible by K
// Difficulty: Medium
// Tags: array, hash
//
// Approach: Use two pointers or sliding window technique
// Time Complexity: O(n) or O(n log n)
// Space Complexity: O(n) for hash map

impl Solution {
pub fn max_subarray_sum(nums: Vec<i32>, k: i32) -> i64 {

}
}
```

Ruby Solution:

```
# @param {Integer[]} nums
# @param {Integer} k
# @return {Integer}
def max_subarray_sum(nums, k)

end
```

PHP Solution:

```
class Solution {

/**
* @param Integer[] $nums
* @param Integer $k
* @return Integer
*/
function maxSubarraySum($nums, $k) {

}
}
```

Dart Solution:

```
class Solution {
int maxSubarraySum(List<int> nums, int k) {

}
}
```

Scala Solution:

```
object Solution {
def maxSubarraySum(nums: Array[Int], k: Int): Long = {

}
}
```

Elixir Solution:

```
defmodule Solution do
@spec max_subarray_sum(nums :: [integer], k :: integer) :: integer
def max_subarray_sum(nums, k) do

end
end
```

Erlang Solution:

```
-spec max_subarray_sum(Nums :: [integer()], K :: integer()) -> integer().
max_subarray_sum(Nums, K) ->
.
```

Racket Solution:

```
(define/contract (max-subarray-sum nums k)
(-> (listof exact-integer?) exact-integer? exact-integer?)
)
```
