Problem Description

Table: `Employees`

+-------------+---------+ | Column Name | Type | +-------------+---------+ | employee_id | int | | name | varchar | +-------------+---------+ employee_id is the column with unique values for this table. Each row of this table indicates the name of the employee whose ID is employee_id.

Table: `Salaries`

+-------------+---------+ | Column Name | Type | +-------------+---------+ | employee_id | int | | salary | int | +-------------+---------+ employee_id is the column with unique values for this table. Each row of this table indicates the salary of the employee whose ID is employee_id.

Write a solution to report the IDs of all the employees with **missing information**. The information of an employee is missing if:

* The employee's **name** is missing, or * The employee's **salary** is missing.

Return the result table ordered by `employee_id` **in ascending order**.

The result format is in the following example.

Example 1:

Input: Employees table: +-------------+----------+ | employee_id | name | +-------------+----------+ | 2 | Crew | | 4 | Haven | | 5 | Kristian | +-------------+----------+ Salaries table: +-------------+--------+ | employee_id | salary | +-------------+--------+ | 5 | 76071 | | 1 | 22517 | | 4 | 63539 | +-------------+--------+ **Output:** +-------------+ | employee_id | +-------------+ | 1 | | 2 | +-------------+ **Explanation:** Employees 1, 2, 4, and 5 are working at this company. The name of employee 1 is missing. The salary of employee 2 is missing.

Code Snippets

MySQL:

```
# Write your MySQL query statement below
```

MS SQL Server:

```
/* Write your T-SQL query statement below */
```

PostgreSQL:

```
-- Write your PostgreSQL query statement below
```
