

# Problem 395: Longest Substring with At Least K Repeating Characters

## Problem Information

Difficulty: Medium

Acceptance Rate: 0.00%

Paid Only: No

## Problem Description

Given a string

$s$

and an integer

$k$

, return

the length of the longest substring of

$s$

such that the frequency of each character in this substring is greater than or equal to

$k$

.

if no such substring exists, return 0.

Example 1:

Input:

`s = "aaabb", k = 3`

Output:

3

Explanation:

The longest substring is "aaa", as 'a' is repeated 3 times.

Example 2:

Input:

`s = "ababbc", k = 2`

Output:

5

Explanation:

The longest substring is "ababb", as 'a' is repeated 2 times and 'b' is repeated 3 times.

Constraints:

$1 \leq s.length \leq 10$

4

s

consists of only lowercase English letters.

$1 \leq k \leq 10$
