Problem Description

Table `Person`:

+-----+-----+ | Column Name | Type | +-----+-----+ | id | int | | name | varchar | | phone_number | varchar | +-----+-----+ id is the column of unique values for this table. Each row of this table contains the name of a person and their phone number. Phone number will be in the form 'xxx-yyyyyyy' where xxx is the country code (3 characters) and yyyyyyy is the phone number (7 characters) where x and y are digits. Both can contain leading zeros.

Table `Country`:

+-----+-----+ | Column Name | Type | +-----+-----+ | name | varchar | | country_code | varchar | +-----+-----+ country_code is the column of unique values for this table. Each row of this table contains the country name and its code. country_code will be in the form 'xxx' where x is digits.

Table `Calls`:

+-----+-----+ | Column Name | Type | +-----+-----+ | caller_id | int | | callee_id | int | | duration | int | +-----+-----+ This table may contain duplicate rows. Each row of this table contains the caller id, callee id and the duration of the call in minutes. caller_id != callee_id

A telecommunications company wants to invest in new countries. The company intends to invest in the countries where the average call duration of the calls in this country is strictly

greater than the global average call duration.

Write a solution to find the countries where this company can invest.

Return the result table in **any order**.

The result format is in the following example.

Example 1:

```
**Input:** Person table: +----+-----+-----+ | id | name | phone_number |
+----+-----+-----+ | 3 | Jonathan | 051-1234567 | | 12 | Elvis | 051-7654321 | | 1 |
Moncef | 212-1234567 | | 2 | Maroua | 212-6523651 | | 7 | Meir | 972-1234567 | | 9 | Rachel |
972-0011100 | +----+-----+-----+ Country table: +-----+-----+ | name |
country_code | +-----+-----+ | Peru | 051 | | Israel | 972 | | Morocco | 212 | | Germany
| 049 | | Ethiopia | 251 | +-----+-----+ Calls table: +-----+-----+-----+ |
caller_id | callee_id | duration | +-----+-----+-----+ | 1 | 9 | 33 | | 2 | 9 | 4 | | 1 | 2 | 59 |
| 3 | 12 | 102 | | 3 | 12 | 330 | | 12 | 3 | 5 | | 7 | 9 | 13 | | 7 | 1 | 3 | | 9 | 7 | 1 | | 1 | 7 | 7 |
+-----+-----+-----+ **Output:** +-----+ | country | +-----+ | Peru | +-----+
**Explanation:** The average call duration for Peru is (102 + 102 + 330 + 330 + 5 + 5) / 6 =
145.666667 The average call duration for Israel is (33 + 4 + 13 + 13 + 3 + 1 + 1 + 7) / 8 =
9.37500 The average call duration for Morocco is (33 + 4 + 59 + 59 + 3 + 7) / 6 = 27.5000
Global call duration average = (2 * (33 + 4 + 59 + 102 + 330 + 5 + 13 + 3 + 1 + 7)) / 20 =
55.70000 Since Peru is the only country where the average call duration is greater than the
global average, it is the only recommended country.
```

Code Snippets

MySQL:

```
# Write your MySQL query statement below
```

MS SQL Server:

```
/* Write your T-SQL query statement below */
```

PostgreSQL:

```
-- Write your PostgreSQL query statement below
```
