

Problem 1890: The Latest Login in 2020

Problem Information

Difficulty: Easy

Acceptance Rate: 0.00%

Paid Only: No

Problem Description

Table:

Logins

+-----+-----+ | Column Name | Type | +-----+-----+ | user_id | int | | time_stamp | datetime | +-----+-----+ (user_id, time_stamp) is the primary key (combination of columns with unique values) for this table. Each row contains information about the login time for the user with ID user_id.

Write a solution to report the

latest

login for all users in the year

2020

. Do

not

include the users who did not login in

2020

.

Return the result table

in any order

.

The result format is in the following example.

Example 1:

Input:

Logins table: +-----+-----+ | user_id | time_stamp | +-----+-----+ |
6 | 2020-06-30 15:06:07 | | 6 | 2021-04-21 14:06:06 | | 6 | 2019-03-07 00:18:15 | | 8 |
2020-02-01 05:10:53 | | 8 | 2020-12-30 00:46:50 | | 2 | 2020-01-16 02:49:50 | | 2 | 2019-08-25
07:59:08 | | 14 | 2019-07-14 09:00:00 | | 14 | 2021-01-06 11:59:59 | +-----+-----+

Output:

+-----+-----+ | user_id | last_stamp | +-----+-----+ | 6 | 2020-06-30
15:06:07 | | 8 | 2020-12-30 00:46:50 | | 2 | 2020-01-16 02:49:50 | +-----+-----+

Explanation:

User 6 logged into their account 3 times but only once in 2020, so we include this login in the result table. User 8 logged into their account 2 times in 2020, once in February and once in December. We include only the latest one (December) in the result table. User 2 logged into their account 2 times but only once in 2020, so we include this login in the result table. User 14 did not login in 2020, so we do not include them in the result table.

Code Snippets

MySQL:

```
# Write your MySQL query statement below
```

MS SQL Server:

```
/* Write your T-SQL query statement below */
```

PostgreSQL:

```
-- Write your PostgreSQL query statement below
```

Oracle:

```
/* Write your PL/SQL query statement below */
```

Pandas:

```
import pandas as pd

def latest_login(logins: pd.DataFrame) -> pd.DataFrame:
```

Solutions

MySQL Solution:

```
# Write your MySQL query statement below
```

MS SQL Server Solution:

```
/* Write your T-SQL query statement below */
```

PostgreSQL Solution:

```
-- Write your PostgreSQL query statement below
```

Oracle Solution:

```
/* Write your PL/SQL query statement below */
```

Pandas Solution:

```
import pandas as pd

def latest_login(logins: pd.DataFrame) -> pd.DataFrame:
```
