Problem Description

Table: `Transactions`

+-----+-----+ | Column Name | Type | +-----+-----+ | id | int | | country |
varchar | | state | enum | | amount | int | | trans_date | date | +-----+-----+ id is the
primary key of this table. The table has information about incoming transactions. The state
column is an enum of type ["approved", "declined"].

Write an SQL query to find for each month and country, the number of transactions and their
total amount, the number of approved transactions and their total amount.

Return the result table in ****any order****.

The query result format is in the following example.

****Example 1:****

****Input:**** Transactions table: +-----+-----+-----+-----+-----+ | id | country | state |
