Problem 669: Trim a Binary Search Tree

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the

root

of a binary search tree and the lowest and highest boundaries as

low

and

high

, trim the tree so that all its elements lies in

[low, high]

. Trimming the tree should

not

change the relative structure of the elements that will remain in the tree (i.e., any node's descendant should remain a descendant). It can be proven that there is a

unique answer

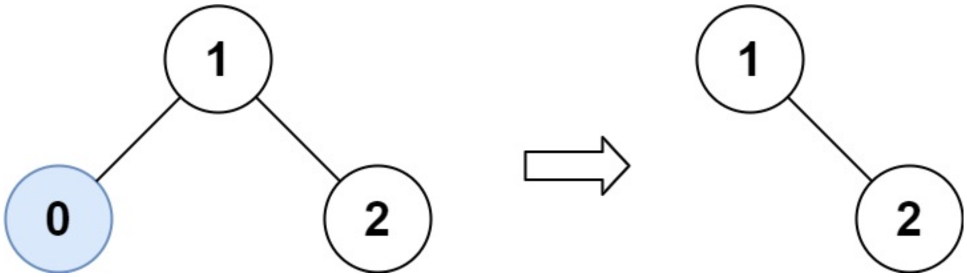
.

Return

the root of the trimmed binary search tree

. Note that the root may change depending on the given bounds.

Example 1:



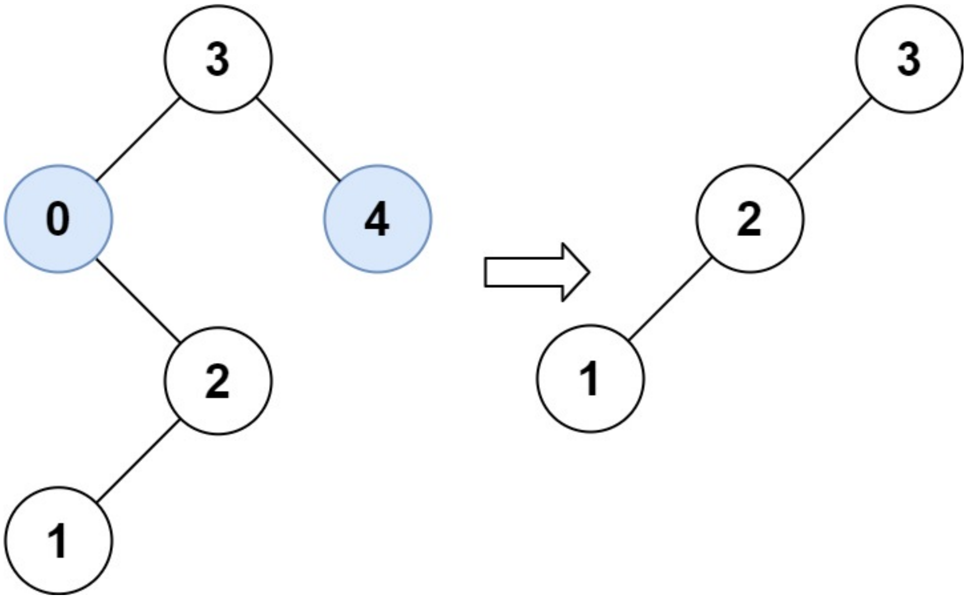
Input:

root = [1,0,2], low = 1, high = 2

Output:

[1,null,2]

Example 2:



Input:

root = [3,0,4,null,2,null,null,1], low = 1, high = 3

Output:

[3,2,null,1]

Constraints:

The number of nodes in the tree is in the range

[1, 10

4

]

.

0 <= Node.val <= 10

4

The value of each node in the tree is

unique

.

root

is guaranteed to be a valid binary search tree.

0 <= low <= high <= 10

4

Code Snippets

C++:

```
