Problem 1740: Find Distance in a Binary Tree

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the root of a binary tree and two integers

p

and

q

, return

the

distance

between the nodes of value

p

and value

q

in the tree

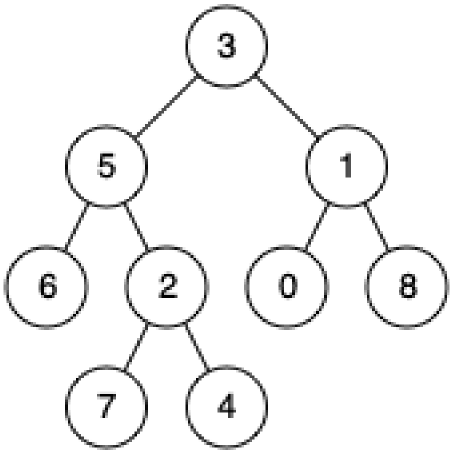
.

The

distance

between two nodes is the number of edges on the path from one to the other.

Example 1:



Input:

root = [3,5,1,6,2,0,8,null,null,7,4], p = 5, q = 0

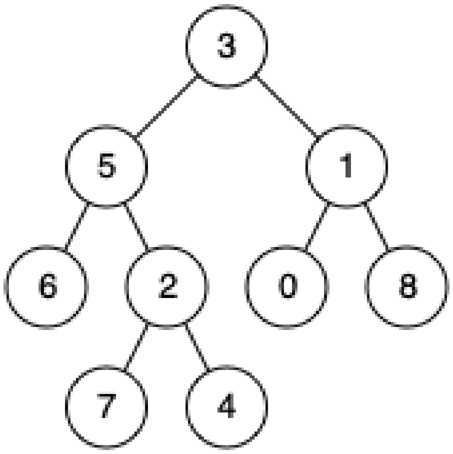
Output:

3

Explanation:

There are 3 edges between 5 and 0: 5-3-1-0.

Example 2:



Input:

root = [3,5,1,6,2,0,8,null,null,7,4], p = 5, q = 7

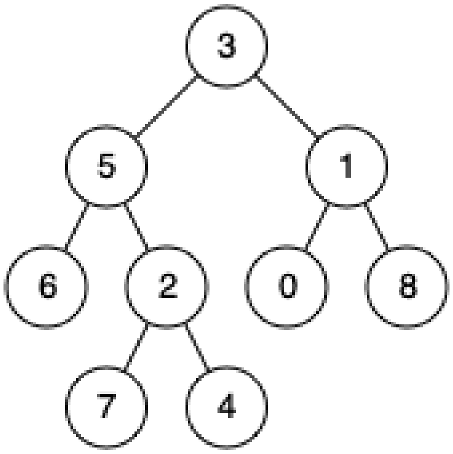
Output:

2

Explanation:

There are 2 edges between 5 and 7: 5-2-7.

Example 3:



Input:

root = [3,5,1,6,2,0,8,null,null,7,4], p = 5, q = 5

Output:

0

Explanation:

The distance between a node and itself is 0.

Constraints:

The number of nodes in the tree is in the range

[1, 10

4

]

.

0 <= Node.val <= 10

9

All

Node.val

are

unique

.

p

and

q

are values in the tree.

Code Snippets

C++:

```
