Problem 508: Most Frequent Subtree Sum

Problem Information

Difficulty: Medium
Acceptance Rate: 0.00%
Paid Only: No

Problem Description

Given the

root

of a binary tree, return the most frequent

subtree sum

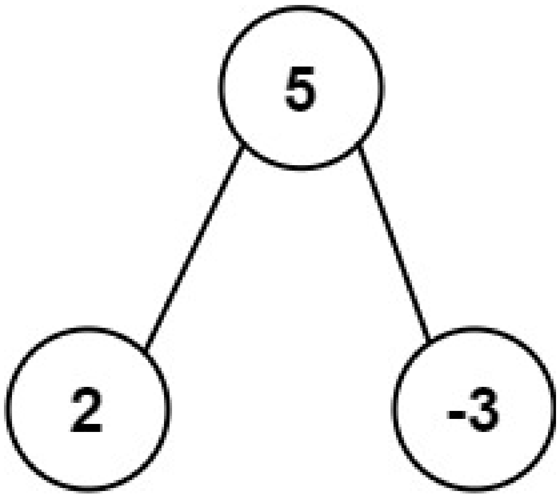
. If there is a tie, return all the values with the highest frequency in any order.

The

subtree sum

of a node is defined as the sum of all the node values formed by the subtree rooted at that node (including the node itself).

Example 1:



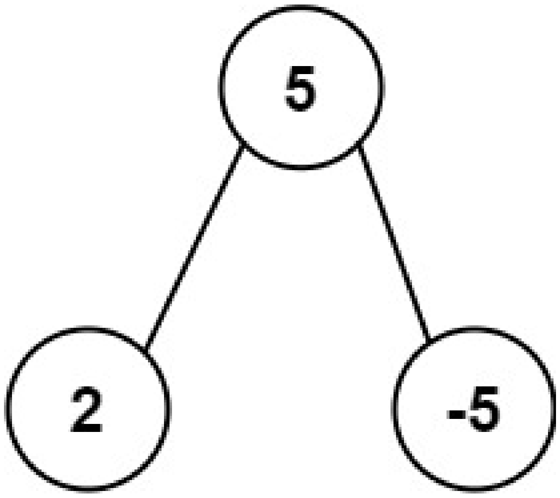
Input:

root = [5,2,-3]

Output:

[2,-3,4]

Example 2:



Input:

root = [5,2,-5]

Output:

[2]

Constraints:

The number of nodes in the tree is in the range

[1, 10

4

]

.

-10

5

<= Node.val <= 10
