

# Problem 1321: Restaurant Growth

## Problem Information

**Difficulty:** Medium

**Acceptance Rate:** 57.75%

**Paid Only:** No

**Tags:** Database

## Problem Description

Table: `Customer`

+-----+-----+ | Column Name | Type | +-----+-----+ | customer\_id | int || name | varchar | | visited\_on | date | | amount | int | +-----+-----+ In  
SQL,(customer\_id, visited\_on) is the primary key for this table. This table contains data about customer transactions in a restaurant. visited\_on is the date on which the customer with ID (customer\_id) has visited the restaurant. amount is the total paid by a customer.

You are the restaurant owner and you want to analyze a possible expansion (there will be at least one customer every day).

Compute the moving average of how much the customer paid in a seven days window (i.e., current day + 6 days before). `average\_amount` should be \*\*rounded to two decimal places\*\*.

Return the result table ordered by `visited\_on` \*\*in ascending order\*\*.

The result format is in the following example.

\*\*Example 1:\*\*

\*\*Input:\*\* Customer table: +-----+-----+-----+-----+ | customer\_id | name | visited\_on | amount | +-----+-----+-----+-----+ | 1 | Jhon | 2019-01-01 | 100 | | 2 | Daniel | 2019-01-02 | 110 | | 3 | Jade | 2019-01-03 | 120 | | 4 | Khaled | 2019-01-04 | 130 | | 5 | Winston | 2019-01-05 | 110 | | 6 | Elvis | 2019-01-06 | 140 | | 7 | Anna | 2019-01-07 | 150 | | 8 | Maria | 2019-01-08 | 80 | | 9 | Jaze | 2019-01-09 | 110 | | 1 | Jhon | 2019-01-10 | 130 | | 3 | Jade | 2019-01-10 | 150 |

```
+-----+-----+-----+ **Output:**  
+-----+-----+ | visited_on | amount | average_amount |  
+-----+-----+ | 2019-01-07 | 860 | 122.86 | | 2019-01-08 | 840 | 120 |  
| 2019-01-09 | 840 | 120 | | 2019-01-10 | 1000 | 142.86 |  
+-----+-----+ **Explanation:** 1st moving average from 2019-01-01  
to 2019-01-07 has an average_amount of  $(100 + 110 + 120 + 130 + 110 + 140 + 150)/7 = 122.86$  2nd moving average from 2019-01-02 to 2019-01-08 has an average_amount of  $(110 + 120 + 130 + 110 + 140 + 150 + 80)/7 = 120$  3rd moving average from 2019-01-03 to 2019-01-09 has an average_amount of  $(120 + 130 + 110 + 140 + 150 + 80 + 110)/7 = 120$  4th moving average from 2019-01-04 to 2019-01-10 has an average_amount of  $(130 + 110 + 140 + 150 + 80 + 110 + 130)/7 = 142.86$ 
```

## Code Snippets

### MySQL:

```
# Write your MySQL query statement below
```

### MS SQL Server:

```
/* Write your T-SQL query statement below */
```

### PostgreSQL:

```
-- Write your PostgreSQL query statement below
```
