

# Problem 687: Longest Univalue Path

## Problem Information

**Difficulty:** Medium

**Acceptance Rate:** 0.00%

**Paid Only:** No

## Problem Description

Given the

root

of a binary tree, return

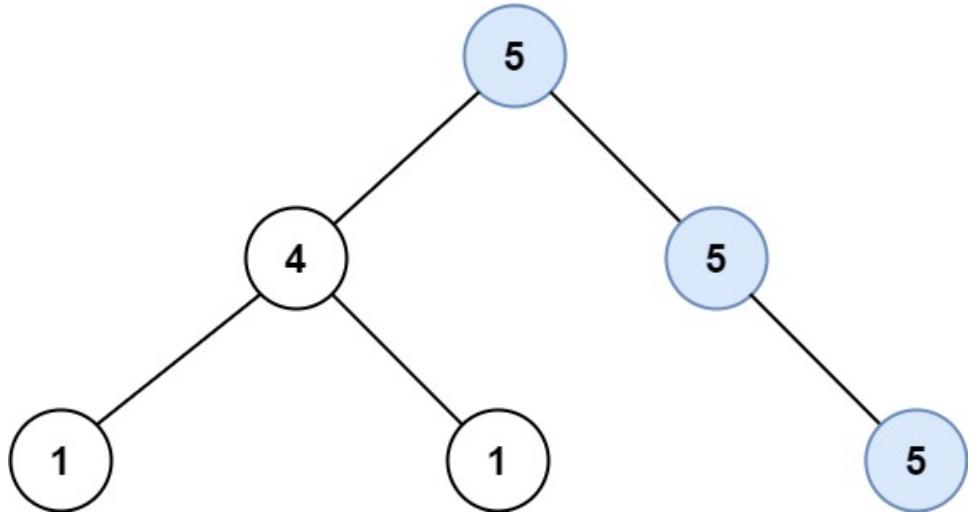

the length of the longest path, where each node in the path has the same value

. This path may or may not pass through the root.

The length of the path

between two nodes is represented by the number of edges between them.

Example 1:

Input:

```
root = [5,4,5,1,1,null,5]
```

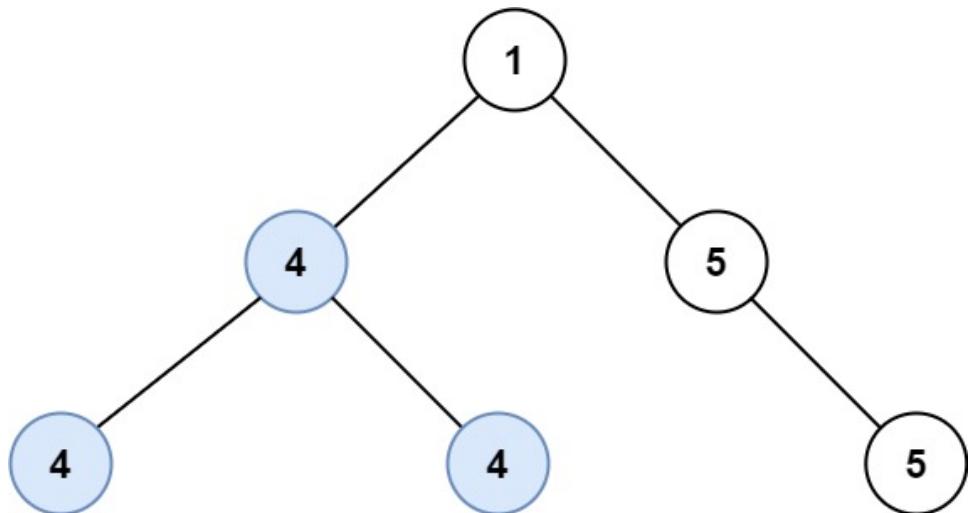

Output:

2

Explanation:

The shown image shows that the longest path of the same value (i.e. 5).

Example 2:

Input:

```
root = [1,4,5,4,4,null,5]
```

Output:

2

Explanation:

The shown image shows that the longest path of the same value (i.e. 4).

Constraints:

The number of nodes in the tree is in the range

[0, 10]

4

]

-1000 <= Node.val <= 1000

The depth of the tree will not exceed

1000
