

Problem 543: Diameter of Binary Tree

Problem Information

Difficulty: Easy

Acceptance Rate: 64.59%

Paid Only: No

Tags: Tree, Depth-First Search, Binary Tree

Problem Description

Given the `root` of a binary tree, return _the length of the**diameter** of the tree_.

The **diameter** of a binary tree is the **length** of the longest path between any two nodes in a tree. This path may or may not pass through the `root` .

The **length** of a path between two nodes is represented by the number of edges between them.

Example 1:

Input: root = [1,2,3,4,5] **Output:** 3 **Explanation:** 3 is the length of the path [4,2,1,3] or [5,2,1,3].

Example 2:

Input: root = [1,2] **Output:** 1

Constraints:

* The number of nodes in the tree is in the range `[1, 104]`. * `-100 <= Node.val <= 100`

Code Snippets

C++:

```
/**  
 * Definition for a binary tree node.  
 * struct TreeNode {  
 *     int val;  
 *     TreeNode *left;  
 *     TreeNode *right;  
 *     TreeNode() : val(0), left(nullptr), right(nullptr) {}  
 *     TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}  
 *     TreeNode(int x, TreeNode *left, TreeNode *right) : val(x), left(left),  
 *         right(right) {}  
 * };  
 */  
class Solution {  
public:  
    int diameterOfBinaryTree(TreeNode* root) {  
  
    }  
};
```

Java:

```
/**  
 * Definition for a binary tree node.  
 * public class TreeNode {  
 *     int val;  
 *     TreeNode left;  
 *     TreeNode right;  
 *     TreeNode() {}  
 *     TreeNode(int val) { this.val = val; }  
 *     TreeNode(int val, TreeNode left, TreeNode right) {  
 *         this.val = val;  
 *         this.left = left;  
 *         this.right = right;  
 *     }  
 * }  
 */  
class Solution {  
    public int diameterOfBinaryTree(TreeNode root) {  
  
    }  
}
```

Python3:

```
# Definition for a binary tree node.
# class TreeNode:
#     def __init__(self, val=0, left=None, right=None):
#         self.val = val
#         self.left = left
#         self.right = right
class Solution:

    def diameterOfBinaryTree(self, root: Optional[TreeNode]) -> int:
```
