

# Problem 116: Populating Next Right Pointers in Each Node

## Problem Information

Difficulty: Medium

Acceptance Rate: 0.00%

Paid Only: No

## Problem Description

You are given a

perfect binary tree

where all leaves are on the same level, and every parent has two children. The binary tree has the following definition:

```
struct Node { int val; Node *left; Node *right; Node *next; }
```

Populate each next pointer to point to its next right node. If there is no next right node, the next pointer should be set to

NULL

Initially, all next pointers are set to

NULL

Example 1:

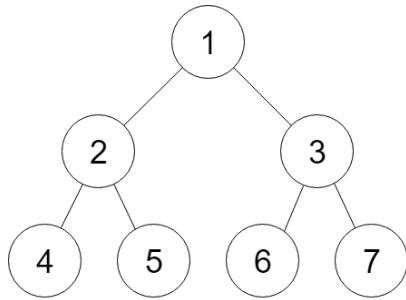

Figure A

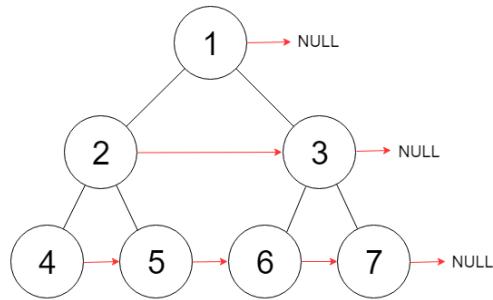

Figure B

Input:

`root = [1,2,3,4,5,6,7]`

Output:

`[1,#,2,3,#,4,5,6,7,#]`

Explanation:

Given the above perfect binary tree (Figure A), your function should populate each next pointer to point to its next right node, just like in Figure B. The serialized output is in level order as connected by the next pointers, with '#' signifying the end of each level.

Example 2:

Input:

`root = []`

Output:

`[]`

Constraints:

The number of nodes in the tree is in the range

`[0, 2`

- 1]

-1000 <= Node.val <= 1000

Follow-up:

You may only use constant extra space.

The recursive approach is fine. You may assume implicit stack space does not count as extra space for this problem.

## Code Snippets

C++:

```
/*
// Definition for a Node.
class Node {
public:
    int val;
    Node* left;
    Node* right;
    Node* next;

    Node() : val(0), left(NULL), right(NULL), next(NULL) {}

    Node(int _val) : val(_val), left(NULL), right(NULL), next(NULL) {}

    Node(int _val, Node* _left, Node* _right, Node* _next)
        : val(_val), left(_left), right(_right), next(_next) {}
};

class Solution {
public:
    Node* connect(Node* root) {

    }
}
```

```
};
```

### Java:

```
/*
// Definition for a Node.
class Node {
public int val;
public Node left;
public Node right;
public Node next;

public Node() {}

public Node(int _val) {
val = _val;
}

public Node(int _val, Node _left, Node _right, Node _next) {
val = _val;
left = _left;
right = _right;
next = _next;
}
};

class Solution {
public Node connect(Node root) {

}
}
```

### Python3:

```
"""
# Definition for a Node.
class Node:
def __init__(self, val: int = 0, left: 'Node' = None, right: 'Node' = None,
next: 'Node' = None):
self.val = val
self.left = left
```

```

        self.right = right
        self.next = next
    """
}

class Solution:
    def connect(self, root: 'Optional[Node]') -> 'Optional[Node]':

```

## Python:

```

"""
# Definition for a Node.
class Node(object):
    def __init__(self, val=0, left=None, right=None, next=None):
        self.val = val
        self.left = left
        self.right = right
        self.next = next
"""

class Solution(object):
    def connect(self, root):
        """
:type root: Node
:rtype: Node
"""

```

## JavaScript:

```

/**
 * // Definition for a _Node.
 * function _Node(val, left, right, next) {
 *     this.val = val === undefined ? null : val;
 *     this.left = left === undefined ? null : left;
 *     this.right = right === undefined ? null : right;
 *     this.next = next === undefined ? null : next;
 * }
 */

/**
 * @param {_Node} root
 * @return {_Node}
 */

```

```
var connect = function(root) {  
};
```

### TypeScript:

```
/**  
 * Definition for _Node.  
 * class _Node {  
 *   val: number  
 *   left: _Node | null  
 *   right: _Node | null  
 *   next: _Node | null  
 *   constructor(val?: number, left?: _Node, right?: _Node, next?: _Node) {  
 *     this.val = (val==undefined ? 0 : val)  
 *     this.left = (left==undefined ? null : left)  
 *     this.right = (right==undefined ? null : right)  
 *     this.next = (next==undefined ? null : next)  
 *   }  
 * }  
 */  
  
function connect(root: _Node | null): _Node | null {  
};
```

### C#:

```
/*  
// Definition for a Node.  
public class Node {  
    public int val;  
    public Node left;  
    public Node right;  
    public Node next;  
  
    public Node() {}  
  
    public Node(int _val) {  
        val = _val;  
    }  
}
```

```

public Node(int _val, Node _left, Node _right, Node _next) {
    val = _val;
    left = _left;
    right = _right;
    next = _next;
}

public class Solution {
    public Node Connect(Node root) {
        if (root == null) return null;
        if (root.left != null) root.left.next = root.right;
        if (root.right != null) root.right.next = root.next;
        if (root.next != null) root.next.left.next = root.next.right;
        Connect(root.left);
        Connect(root.right);
    }
}

```

## C:

```

/**
 * Definition for a Node.
 * struct Node {
 *     int val;
 *     struct Node *left;
 *     struct Node *right;
 *     struct Node *next;
 * };
 */

struct Node* connect(struct Node* root) {
    if (root == NULL) return NULL;
    if (root->left != NULL) root->left->next = root->right;
    if (root->right != NULL) root->right->next = root->next;
    if (root->next != NULL) root->next->left->next = root->next->right;
    connect(root->left);
    connect(root->right);
}

```

## Go:

```

/**
 * Definition for a Node.
 * type Node struct {
 *     Val int
 *     Left *Node
 *     Right *Node
 *     Next *Node
 * }
 */

```

```
func connect(root *Node) *Node {  
    }  
}
```

### Kotlin:

```
/**  
 * Definition for a Node.  
 * class Node(var `val`: Int) {  
 *     var left: Node? = null  
 *     var right: Node? = null  
 *     var next: Node? = null  
 * }  
 */  
  
class Solution {  
    fun connect(root: Node?): Node? {  
        }  
    }  
}
```

### Swift:

```
/**  
 * Definition for a Node.  
 * public class Node {  
 *     public var val: Int  
 *     public var left: Node?  
 *     public var right: Node?  
 *     public var next: Node?  
 *     public init(_ val: Int) {  
 *         self.val = val  
 *         self.left = nil  
 *         self.right = nil  
 *         self.next = nil  
 *     }  
 * }  
 */  
  
class Solution {  
    func connect(_ root: Node?) -> Node? {  
        }  
    }  
}
```

```
}
```

```
}
```

## Ruby:

```
# Definition for Node.  
# class Node  
# attr_accessor :val, :left, :right, :next  
# def initialize(val)  
#   @val = val  
#   @left, @right, @next = nil, nil, nil  
# end  
# end  
  
# @param {Node} root  
# @return {Node}  
def connect(root)  
  
end
```

## PHP:

```
/**  
 * Definition for a Node.  
 * class Node {  
 *   function __construct($val = 0) {  
 *     $this->val = $val;  
 *     $this->left = null;  
 *     $this->right = null;  
 *     $this->next = null;  
 *   }  
 * }  
 */  
  
class Solution {  
/**  
 * @param Node $root  
 * @return Node  
 */  
public function connect($root) {
```

```
}
```

```
}
```

## Scala:

```
/**  
 * Definition for a Node.  
 * class Node(var _value: Int) {  
 * var value: Int = _value  
 * var left: Node = null  
 * var right: Node = null  
 * var next: Node = null  
 * }  
 */  
  
object Solution {  
def connect(root: Node): Node = {  
  
}  
}
```

## Solutions

### C++ Solution:

```
/*  
 * Problem: Populating Next Right Pointers in Each Node  
 * Difficulty: Medium  
 * Tags: tree, search, linked_list, stack

 */

/*
// Definition for a Node.
class Node {
public int val;
public Node left;
public Node right;
public Node next;

public Node() {

```

```

// TODO: Implement optimized solution
return 0;
}

public Node(int _val) {
    val = _val;
}

public Node(int _val, Node _left, Node _right, Node _next) {
    val = _val;
    left = _left;
    right = _right;
    next = _next;
}
};

*/
}

class Solution {
    public Node connect(Node root) {
        if (root == null) {
            return null;
        }
        if (root.left != null) {
            root.left.next = root.right;
            if (root.right != null) {
                root.right.next = root.next.left;
            } else {
                root.right.next = root.next;
            }
        }
        if (root.left != null) {
            connect(root.left);
        }
        if (root.right != null) {
            connect(root.right);
        }
    }
}

```

### Python3 Solution:

```

"""

 */

/**
 * Definition for a Node.
 * struct Node {
 *     int val;
 *     struct Node *left;
 *     struct Node *right;
 *     struct Node *next;
 * };
 */

struct Node* connect(struct Node* root) {
    if (root == NULL)
        return NULL;
    if (root->left != NULL)
        root->left->next = root->right;
    if (root->right != NULL)
        root->right->next = root->next == NULL ? NULL : root->next->left;
    connect(root->left);
    connect(root->right);
}

```

### Go Solution:

```

// Problem: Populating Next Right Pointers in Each Node
// Difficulty: Medium
// Tags: tree, search, linked_list, stack
//

```

```

// Approach: DFS or BFS traversal
// Time Complexity: O(n) where n is number of nodes
// Space Complexity: O(h) for recursion stack where h is height

/**
 * Definition for a Node.
 * type Node struct {
 *     Val int
 *     Left *Node
 *     Right *Node
 *     Next *Node
 * }
 */

func connect(root *Node) *Node {
}

```

### Kotlin Solution:

```

/**
 * Definition for a Node.
 * class Node(var `val`: Int) {
 *     var left: Node? = null
 *     var right: Node? = null
 *     var next: Node? = null
 * }
 */

class Solution {
    fun connect(root: Node?): Node? {
        ...
    }
}

```

### Swift Solution:

```

/**
 * Definition for a Node.
 * public class Node {
 *     public var val: Int
 *     public var left: Node?
 *     public var right: Node?
 *     public var next: Node?
 * }
 */

```

```

* public var left: Node?
* public var right: Node?
* public var next: Node?
* public init(_ val: Int) {
*   self.val = val
*   self.left = nil
*   self.right = nil
*   self.next = nil
* }
* }
*/
class Solution {
func connect(_ root: Node?) -> Node? {

}
}

```

### Ruby Solution:

```

# Definition for Node.
# class Node
# attr_accessor :val, :left, :right, :next
# def initialize(val)
#   @val = val
#   @left, @right, @next = nil, nil, nil
# end
# end

# @param {Node} root
# @return {Node}
def connect(root)

end

```

### PHP Solution:

```

/**
* Definition for a Node.
* class Node {
*   function __construct($val = 0) {

```

```

* $this->val = $val;
* $this->left = null;
* $this->right = null;
* $this->next = null;
* }
* }
*/
class Solution {
/**
* @param Node $root
* @return Node
*/
public function connect($root) {

}
}

```

### Scala Solution:

```

/** 
* Definition for a Node.
* class Node(var _value: Int) {
* var value: Int = _value
* var left: Node = null
* var right: Node = null
* var next: Node = null
* }
*/
object Solution {
def connect(root: Node): Node = {

}
}

```
