

Problem 2265: Count Nodes Equal to Average of Subtree

Problem Information

Difficulty: Medium

Acceptance Rate: 0.00%

Paid Only: No

Problem Description

Given the

root

of a binary tree, return

the number of nodes where the value of the node is equal to the

average

of the values in its

subtree

Note:

The

average

of

n

elements is the

sum

of the

n

elements divided by

n

and

rounded down

to the nearest integer.

A

subtree

of

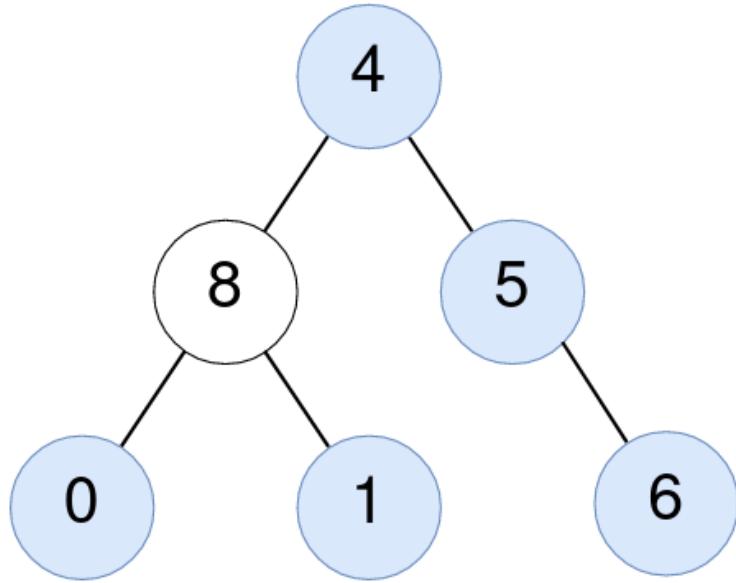

root

is a tree consisting of

root

and all of its descendants.

Example 1:

Input:

```
root = [4,8,5,0,1,null,6]
```

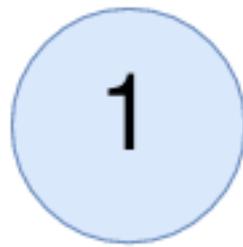

Output:

5

Explanation:

For the node with value 4: The average of its subtree is $(4 + 8 + 5 + 0 + 1 + 6) / 6 = 24 / 6 = 4$.
For the node with value 5: The average of its subtree is $(5 + 6) / 2 = 11 / 2 = 5$. For the node with value 0: The average of its subtree is $0 / 1 = 0$. For the node with value 1: The average of its subtree is $1 / 1 = 1$. For the node with value 6: The average of its subtree is $6 / 1 = 6$.

Example 2:

Input:

```
root = [1]
```

Output:

```
1
```

Explanation:

For the node with value 1: The average of its subtree is $1 / 1 = 1$.

Constraints:

The number of nodes in the tree is in the range

```
[1, 1000]
```

.

```
0 <= Node.val <= 1000
```

Code Snippets

C++:

```
/**  
 * Definition for a binary tree node.  
 * struct TreeNode {  
 *     int val;  
 *     TreeNode *left;  
 *     TreeNode *right;  
 * };
```

```

* TreeNode *left;
* TreeNode *right;
* TreeNode() : val(0), left(nullptr), right(nullptr) {}
* TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
* TreeNode(int x, TreeNode *left, TreeNode *right) : val(x), left(left),
right(right) {}
* };
*/
class Solution {
public:
int averageOfSubtree(TreeNode* root) {

}
};

```

Java:

```

/**
* Definition for a binary tree node.
* public class TreeNode {
* int val;
* TreeNode left;
* TreeNode right;
* TreeNode() {}
* TreeNode(int val) { this.val = val; }
* TreeNode(int val, TreeNode left, TreeNode right) {
* this.val = val;
* this.left = left;
* this.right = right;
* }
* }
*
class Solution {
public int averageOfSubtree(TreeNode root) {

}
}

```

Python3:

```

# Definition for a binary tree node.
# class TreeNode:

```

```
# def __init__(self, val=0, left=None, right=None):
#     self.val = val
#     self.left = left
#     self.right = right
class Solution:
    def averageOfSubtree(self, root: TreeNode) -> int:
```

Python:

```
# Definition for a binary tree node.
# class TreeNode(object):
#     def __init__(self, val=0, left=None, right=None):
#         self.val = val
#         self.left = left
#         self.right = right
class Solution(object):
    def averageOfSubtree(self, root):
        """
:type root: TreeNode
:rtype: int
"""

```

JavaScript:

```
/**
 * Definition for a binary tree node.
 * function TreeNode(val, left, right) {
 *     this.val = (val===undefined ? 0 : val)
 *     this.left = (left===undefined ? null : left)
 *     this.right = (right===undefined ? null : right)
 * }
 */
/**
 * @param {TreeNode} root
 * @return {number}
 */
var averageOfSubtree = function(root) {

};
```

TypeScript:

```

    /**
 * Definition for a binary tree node.
 * class TreeNode {
 * val: number
 * left: TreeNode | null
 * right: TreeNode | null
 * constructor(val?: number, left?: TreeNode | null, right?: TreeNode | null)
 *
 * this.val = (val===undefined ? 0 : val)
 * this.left = (left===undefined ? null : left)
 * this.right = (right===undefined ? null : right)
 *
 * }
 *
 */
function averageOfSubtree(root: TreeNode | null): number {
}

```

C#:

```

    /**
 * Definition for a binary tree node.
 * public class TreeNode {
 * public int val;
 * public TreeNode left;
 * public TreeNode right;
 * public TreeNode(int val=0, TreeNode left=null, TreeNode right=null) {
 * this.val = val;
 * this.left = left;
 * this.right = right;
 * }
 *
 * }
 *
 */
public class Solution {
public int AverageOfSubtree(TreeNode root) {

}
}

```

C:

```

/**
 * Definition for a binary tree node.
 * struct TreeNode {
 *     int val;
 *     struct TreeNode *left;
 *     struct TreeNode *right;
 * };
 */
int averageOfSubtree(struct TreeNode* root) {

}

```

Go:

```

/**
 * Definition for a binary tree node.
 * type TreeNode struct {
 *     Val int
 *     Left *TreeNode
 *     Right *TreeNode
 * }
 */
func averageOfSubtree(root *TreeNode) int {

}

```

Kotlin:

```

/**
 * Example:
 * var ti = TreeNode(5)
 * var v = ti.`val`
 *
 * Definition for a binary tree node.
 * class TreeNode(var `val`: Int) {
 *     var left: TreeNode? = null
 *     var right: TreeNode? = null
 * }
 */
class Solution {
    fun averageOfSubtree(root: TreeNode?): Int {
        ...
    }
}

```

Swift:

```
/**
 * Definition for a binary tree node.
 * public class TreeNode {
 *     public var val: Int
 *     public var left: TreeNode?
 *     public var right: TreeNode?
 *     public init() { self.val = 0; self.left = nil; self.right = nil; }
 *     public init(_ val: Int) { self.val = val; self.left = nil; self.right = nil; }
 *     public init(_ val: Int, _ left: TreeNode?, _ right: TreeNode?) {
 *         self.val = val
 *         self.left = left
 *         self.right = right
 *     }
 * }
 */
class Solution {
    func averageOfSubtree(_ root: TreeNode?) -> Int {
}
}
```

Rust:

```
// Definition for a binary tree node.
// #[derive(Debug, PartialEq, Eq)]
// pub struct TreeNode {
//     pub val: i32,
//     pub left: Option<Rc<RefCell<TreeNode>>,
//     pub right: Option<Rc<RefCell<TreeNode>>,
// }
//
// impl TreeNode {
//     #[inline]
//     pub fn new(val: i32) -> Self {
//         TreeNode {
//             val,
//             left: None,
//             right: None
//         }
//     }
// }
```

```

    // }
    // }

use std::rc::Rc;
use std::cell::RefCell;
impl Solution {
pub fn average_of_subtree(root: Option<Rc<RefCell<TreeNode>>>) -> i32 {

}
}

```

Ruby:

```

# Definition for a binary tree node.
# class TreeNode
# attr_accessor :val, :left, :right
# def initialize(val = 0, left = nil, right = nil)
#   @val = val
#   @left = left
#   @right = right
# end
# end
# @param {TreeNode} root
# @return {Integer}
def average_of_subtree(root)

end

```

PHP:

```

/**
 * Definition for a binary tree node.
 * class TreeNode {
 *   public $val = null;
 *   public $left = null;
 *   public $right = null;
 *   function __construct($val = 0, $left = null, $right = null) {
 *     $this->val = $val;
 *     $this->left = $left;
 *     $this->right = $right;
 *   }
 * }
 */

```

```

class Solution {

    /**
     * @param TreeNode $root
     * @return Integer
     */
    function averageOfSubtree($root) {

    }
}

```

Dart:

```

/***
 * Definition for a binary tree node.
 * class TreeNode {
 * int val;
 * TreeNode? left;
 * TreeNode? right;
 * TreeNode([this.val = 0, this.left, this.right]);
 * }
 */
class Solution {
int averageOfSubtree(TreeNode? root) {

}
}

```

Scala:

```

/**
 * Definition for a binary tree node.
 * class TreeNode(_value: Int = 0, _left: TreeNode = null, _right: TreeNode =
null) {
 * var value: Int = _value
 * var left: TreeNode = _left
 * var right: TreeNode = _right
 * }
 */
object Solution {
def averageOfSubtree(root: TreeNode): Int = {

```

```
}
```

```
}
```

Elixir:

```
# Definition for a binary tree node.  
#  
# defmodule TreeNode do  
#   @type t :: %__MODULE__{  
#     val: integer,  
#     left: TreeNode.t() | nil,  
#     right: TreeNode.t() | nil  
#   }  
#   defstruct val: 0, left: nil, right: nil  
# end  
  
defmodule Solution do  
  @spec average_of_subtree(root :: TreeNode.t | nil) :: integer  
  def average_of_subtree(root) do  
  
  end  
end
```

Erlang:

```
%% Definition for a binary tree node.  
%%  
%% -record(tree_node, {val = 0 :: integer(),  
%%   left = null :: 'null' | #tree_node{},  
%%   right = null :: 'null' | #tree_node{}}).  
  
-spec average_of_subtree(Root :: #tree_node{} | null) -> integer().  
average_of_subtree(Root) ->  
.
```

Racket:

```
; Definition for a binary tree node.  
#|  
  
; val : integer?  
; left : (or/c tree-node? #f)
```

```

; right : (or/c tree-node? #f)
(struct tree-node
  (val left right) #:mutable #:transparent)

; constructor
(define (make-tree-node [val 0])
  (tree-node val #f #f))

| #

(define/contract (average-of-subtree root)
  (-> (or/c tree-node? #f) exact-integer?))
)

```

Solutions

C++ Solution:

```

/*
 * Problem: Count Nodes Equal to Average of Subtree
