Problem Description

Table: `Teams`

+-------------+---------+ | Column Name | Type | +-------------+---------+ | team_name | varchar | +-------------+---------+ team_name is the column with unique values of this table. Each row of this table shows the name of a team.

Write a solution to report all the possible matches of the league. Note that every two teams play two matches with each other, with one team being the `home_team` once and the other time being the `away_team`.

Return the result table in **any order**.

The result format is in the following example.

Example 1:

Input: Teams table: +-------------+ | team_name | +-------------+ | Leetcode FC | | Ahly SC | | Real Madrid | +-------------+ **Output:** +-------------+-------------+ | home_team | away_team | +-------------+-------------+ | Real Madrid | Leetcode FC | | Real Madrid | Ahly SC | | Leetcode FC | Real Madrid | | Leetcode FC | Ahly SC | | Ahly SC | Real Madrid | | Ahly SC | Leetcode FC | +-------------+-------------+ **Explanation:** All the matches of the league are shown in the table.

Code Snippets

MySQL:

```
# Write your MySQL query statement below
```

MS SQL Server:

```
/* Write your T-SQL query statement below */
```

PostgreSQL:

```
-- Write your PostgreSQL query statement below
```
