Problem Description

Table: `Users`

+------------+----------+ | Column Name | Type | +------------+----------+ | user_id | int | | item | varchar | | created_at | datetime | | amount | int | +------------+----------+ This table may contain duplicate records. Each row includes the user ID, the purchased item, the date of purchase, and the purchase amount.

Write a solution to identify active users. An active user is a user that has made a second purchase **within 7 days **of any other of their purchases.

For example, if the ending date is May 31, 2023. So any date between May 31, 2023, and June 7, 2023 (inclusive) would be considered "within 7 days" of May 31, 2023.

Return a list of `user_id` which denotes the list of active users in **any order**.

The result format is in the following example.

Example 1:

Input: Users table: +---------+------------------+------------+--------+ | user_id | item | created_at | amount | +---------+------------------+------------+--------+ | 5 | Smart Crock Pot | 2021-09-18 | 698882 | | 6 | Smart Lock | 2021-09-14 | 11487 | | 6 | Smart Thermostat | 2021-09-10 | 674762 | | 8 | Smart Light Strip | 2021-09-29 | 630773 | | 4 | Smart Cat Feeder | 2021-09-02 | 693545 | | 4 | Smart Bed | 2021-09-13 | 170249 | +---------+------------------+------------+--------+ **Output:** +---------+ | user_id | +---------+ | 6 | +---------+ **Explanation:** - User with user_id 5 has only one transaction, so he is not an active user. - User with user_id 6 has two transaction his first

transaction was on 2021-09-10 and second transation was on 2021-09-14. The distance between the first and second transactions date is <= 7 days. So he is an active user. - User with user_id 8 has only one transaction, so he is not an active user. - User with user_id 4 has two transaction his first transaction was on 2021-09-02 and second transation was on 2021-09-13. The distance between the first and second transactions date is > 7 days. So he is not an active user.

Code Snippets

MySQL:

```
# Write your MySQL query statement below
```

MS SQL Server:

```
/* Write your T-SQL query statement below */
```

PostgreSQL:

```
-- Write your PostgreSQL query statement below
```
